#### ISOBUS circuit configuration for 183350030

The CED252 electronic control unit is compatible with the Universal Terminal UT (release 2.0) and it is already available on the AEF Database (Agricultural Industry Electronics Foundation).

The CED252 electronic control unit is configured for:

- 3 proportional inputs, Type 3, Analog – return to 50%, Negative/Positive
- 10 on/off inputs Type 2, Non Latching (momentary), Increase value
- 3 pairs proportional outputs, PWM control, with current compensation,
- 6 power 60W outputs, ON/OFF control.

This high number of inputs and outputs makes this unit the ideal controller of any professional Front Loader, implementing the most common and automatic functionalities requested by the application. Thanks to its construction, the unit can be mounted outside of the tractor cabine, directly on the Front Loader attachment.

Being ISOBUS compatible makes it easy to interface the control of the complete loader to the joystick already available inside the tractor cabine, and, eventually, adapt the human-machine interface to the preferences and the characteristics of the operator, reducing his physical and cognitive fatigue. The CED252 electronic control unit can be interfaced to the CJW ISOBUS joystick (see page 14 and 18).
