

DVS sectional valves

Walvoil presents the new range of DVS sectional valves

22 October 2019 by Walvoil

The DVS Series directional valves, Hydrocontrol branded, are a new family of sectional valves specifically designed for several applications: Forestry Machines, Skid Steer Loaders and Mini Dumper, Cranes, Wheel Loaders, Backhoe Loaders, Garbage Compactors, Hook and Skip

Loaders, Drilling Rigs and Forklifts.

These valves have very exact control features, they are smooth and precise in operation, with compact light weight design. The DVS valves are also available in several configurations and custom solutions.

Working sections have auxiliary valves and a wide range of interchangeable spools. The DVS valves can be fitted with integrated proportional electrohydraulic controls, and special configuration for LS variable displacement pumps is available on request.

Flexibility and simplicity of assembly are the main features of the whole range, that makes them suitable to satisfy different requirements and, above all, for retail market. Meaningful also the DVS valves' propensity for performance and energy saving.
